

## Demonstratives: Alternative View Graphics

ThemeVision uses graphic techniques to show parts and processes in a clear and concise visual. This helps focus attention on the facts that matter.

The example shown here is an alternate view created to show issues related to chimney construction. Extraneous details were minimized and materials were layered in order to enable them to be shown in place or removed, as needed at particular points in the argument.

ThemeVision can also produce graphics to show:

- Enlargements
- Overviews
- Cut-aways
- Annotated Images
- Stylized Images
